

NSIBI Dhia Elhack

Engineering Student in Embedded Telecommunications | Networks, Cybersecurity & AI

Bizerte, Tunisia | nsibidhiaelhack@gmail.com | linkedin.com/in/dhia-nsibi | github.com/dhiaelhack | gitlab.com/nsibidhiaelhack

Seeking a 4–6 month Final-Year Internship (PFE) from October 2026 in Networks, Cybersecurity or AI

EDUCATION

National Engineering School of Sousse (ENISo), Tunisia | 2024 Present

Engineering Degree in progress Embedded Telecommunications Engineering (GTE), Telecommunications Networks

Preparatory Institute for Engineering Studies of Gabès (IPEIG), Tunisia | 2022 2024

Preparatory Classes Physics & Technology (Techno/T track)

PROFESSIONAL EXPERIENCE

Summer Intern — Network & Systems Administration | Jul Aug 2026

SOTULUB (Tunisian Lubricants Company) IT Infrastructure / Networks

- Participated in the administration and monitoring of the company's network and systems infrastructure.
- Assisted with troubleshooting and maintenance of IT infrastructure components.

Summer Intern — Software Development (Network Monitoring) | Jul Aug 2025

SOTETEL (Tunisian Telecommunications Company) Data Center & Network Administration

- Contributed to the development of a network-monitoring software component within the data center team.
- Collaborated with network administrators to align monitoring tools with operational requirements.

Founder & President — ACM ENISo Student Chapter | 2025 Present

National Engineering School of Sousse Student Association

- Led the official affiliation of the ACM student chapter and helped establish its organizational structure.
- Organized programming and technical events for the student community.

SELECTED PROJECTS

HuginnWatch — Network & Server Security Monitoring

Designed and evaluated a FastAPI/Streamlit monitoring platform with vulnerability scanning (Nmap), alerting, and telemetry-based anomaly detection.

Agentic RAG Assistant

Developed a LangChain ReAct-based document question-answering system; investigated retrieval quality, agent tool usage, and failure modes using Pinecone and LangSmith.

VPN-MPLS Network Architecture

Designed and emulated a multi-site MPLS/VPN backbone using GNS3, Docker, and FRRouting; configured OSPF, BGP, and MP-BGP and validated routing and label switching.

AI-Assisted Integrated Antenna System

Conducted a literature review of AI/ML approaches for integrated antenna systems supporting intelligent telecommunications applications.

Intelligent Facial Recognition Application

Built a real-time facial detection and recognition pipeline using Flask, OpenCV, and TensorFlow, trained and tested on customized image data.

Secure DevSecOps CI/CD Pipeline

Developed a full-stack platform with an automated GitLab CI/Docker pipeline integrating SonarQube and OWASP ZAP for code quality and security-risk assessment.

Real-Time GSM/GPS Vehicle Tracking System

Designed an embedded vehicle-tracking system using GSM/GPS modules (SIM800L), secure position transmission, live mapping, and trip history.

LAS Shell — Unix Shell Implementation in C

Implemented a POSIX-style Unix shell with process control, IPC, pipelines, redirection, signals, background jobs, history, and aliases.

Intelligent Solar Tracker

Built an autonomous solar-orientation prototype based on ESP32, LDR sensors, and servomotors using differential light-intensity control.

TECHNICAL SKILLS

Programming Languages: Python, C/C++, Java, Scala, JavaScript/TypeScript

Frameworks & Libraries: LangChain, TensorFlow, OpenCV, FastAPI, Spring Boot, Node.js/Express, Flask, Angular

Networking: OSPF, BGP, MP-BGP, MPLS/VPN, GNS3, FRRouting, Nmap

Tools & Platforms: Docker, GitLab CI, GSM/GPS modules, POSIX systems programming

ACTIVITIES & CERTIFICATIONS

- NVIDIA Deep Learning Institute certificate in Natural Language Processing (NLP).
- Active member of Eureka Club and Orange Digital Center Club.
- Participant in embedded systems, IoT, and AI hackathons.

LANGUAGES

Arabic (Native) · French (Fluent) · English (Fluent)
